PROGRAMMING

Programming will vary depending on access configuration. Follow the instructions according to your access configuration.

Programming 1----- Configure the device

Change the configure settings according to your application (optional). Multiple configuration settings can be changed at one time: enter program mode, change desired settings, then exit program mode.

Set Master Code

The 4-6 digit Master Code is used to prevent unauthorized access to the system. To interface with the device the manager will need a Master Code (factory default code: 6666). We highly recommend immediate update and record of your Master Code.

- 4 -

Programming Step	Keystroke Combination
1. Enter Program Mode	* (Master Code) #
2. Update Master Code	0 (New Master Code) # (Repeat New Master Code) #
3. Exit Program Mode	*

Set Access Configuration

- There are 3 types of access configurations for the device
- > **Card or PIN (Default):** The User must present a valid Card to the device or enter their PIN code followed by the # key, in order to be granted access.
 - > **Card Only:** The User must present a valid Card to the device in order to be granted access.
 - > **Card + PIN:** The User must first present a valid Card to the device and then enter their PIN code followed by the # key, in order to be granted access.

Programming Step	Keystroke Combination
1. Enter Program Mode	* (Master Code) #
2. Card or PIN OR 2. Card + PIN OR 2. Card only	3 0 # 3 1 # 3 2 #
3. Exit Program Mode	*

Set Relay Configuration

The relay configuration sets the behaviour of the output relay on activation.

Programming Step	Keystroke Combination
1. Enter Program Mode	* (Master Code) #
2. Pulse Mode OR 2. Latch Mode	4 (1-99) # The relay time is 1-99 seconds. (1 is 50mS.) Default is 5 seconds. 4 0 # Sets the relay to ON/OFF Latch mode
3. Exit	*

- 5 -

Set Strike-out Alarm

The strike-out alarm will engage after 5 failed card/PIN attempts. Default is OFF. The strike-out alarm can be set to deny access for 10 minutes after engaging or it can be set to disengage only after entering a valid card/PIN or Master code.

Programming Step	Keystroke Combination
1. Enter Program Mode	* (Master Code) #
2. Strike-Out OFF OR 2. Strike-Out ON OR 2. Strike-Out ON	6 0 # (factory default) 6 1 # Access will be denied for 10 minutes 6 2 # The buzzer alarms.
Set alarm time	5 (0 ~ 30) #, Factory default is 1 minute.
3. Exit	*

Programming 2 ----- Program Cards and PINS

Programming will vary depending on the access configuration. Follow the instructions according to your access configuration.

GENERAL PROGRAMMING INFORMATION

- > **User ID Number:** Assign a user ID number to the access code in order to keep track of the users of access cards or PINS. The normal user ID can be any number from 0~989, and the 10 groups of visitors from 990~999.
- IMPORTANT: User IDs do not have to be proceeded with any leading zeros. Recording of User ID is critical. Modifications to user data require either the card or the User ID be available.
- > **Proximity Card:** 125 KHz industry standard 26 bits EM Proximity Card.
- > **Keypad PIN:** The PIN can be any 4~6 digits between 0000~999999 (except 1234 which is reserved for factory testing).
