

BOL1168-R

Removable Bollard

Introduction

BOL1168-R is a high-quality removable bollard which used widely to prevent vehicles from entering security areas. It is an ideal low-cost solution when the depth is not sufficient to install an automatic bollard. The bollard can simply be unlocked and removed by the key provided. This feature allows people to achieve flexible entrance control when access is only occasionally opened. The bollard is commonly found in schools, shopping malls, hotels or housing estates where traffic guidance is needed to protect pedestrians and property. This product provides ideal access control in areas mentioned above and raises the level of security.

Features

- Customization available
- Simple installation and limited digging operations
